Subject: New Boiler

Hi Gary,

The following is an e-mail that we sent to our neighborhood:

Hello Neighbors,

Old houses need a lot of tender loving care. If you've worked with someone who has done a good job for you, please share your experience with the rest of us.

It's been a busy winter up here on the end of [REDACTED]. After the asbestos guys came in, we had Aspen Heating and Cooling replace our 80 year old boiler. At their suggestion, our heating system was converted from steam heat to a more efficient hot water heat. Our heating costs decreased significantly. Aspen also installed gas logs in a fireplace for us. A visit to their showroom is well worth it. If you have any heating or cooling issues, George and I highly recommend Aspen Heating and Cooling.

During the cold snap, a pipe in our family room froze. And where was the break--behind the fireplace. Again, it was Aspen to the rescue. Aspen recommended Nowicki Construction who attacked the repair from the outside. Nowicki Construction (you may have seen the sign in our yard) did a fine job of opening the outside of the house to get at the pipe. When the pipe was replaced, Nowicki Construction replaced and painted the old siding and it looks just like before. They picked up every nail and were very respectful of our landscaping. Chad Nowicki is a very professional nice young man and his crew is great to work with. George and I also highly recommend Nowicki Construction.

Happy Spring to all,

Kathie [REDACTED]
